

ISE

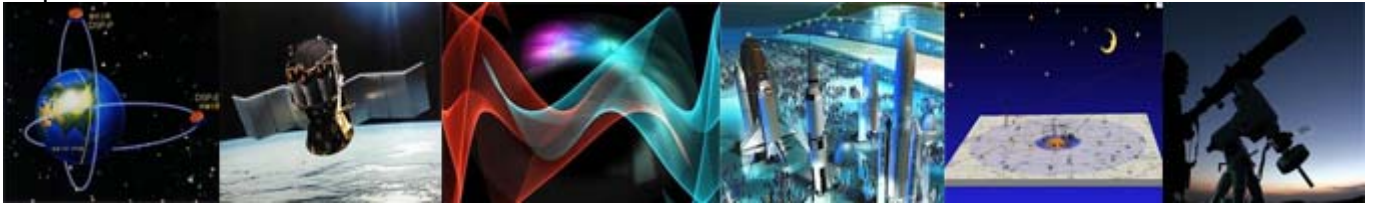

INSTITUTE FOR SCIENTIFIC EXPLORATION

Cutting-Edge Research & Applications

ISE is a global research and development organization whose primary mission is to conduct groundbreaking research in the biomedical, natural sciences, and social sciences fields, and to investigate alternative medicine therapies, alternative scientific theories and hypotheses, scientific anomalies, and other unexplained phenomena in these fields. Secondly, based on research findings, ISE's mission is to develop novel services and technologies that will benefit people, and help solve the major problems faced by societies, worldwide. Among ISE's several divisions are:

The Applied Consciousness Research Division conducts scientific research in the fields of consciousness and extraordinary cognitive skills, such as genius abilities, intuition, psychokinesis and telekinesis, remote viewing, telepathy, precognition, and other extrasensory perception, in order to understand these abilities and to develop and enhance such abilities in individuals.

The Astronomy and Space Sciences Division conducts research on astronomy and space science subjects, such as advanced propulsion systems, anti-gravity, extraterrestrial life, and unexplained aerial phenomena (UFOs), in order to advance human progress in the great frontier of space.

The Energy and Fuels Division conducts research and development on hydrogen and water based fuels, low energy nuclear reactions (LENR), nitrogen based fuels, zero point energy, and other advanced energy concepts in order to enable humanity to have abundant sources of inexpensive energy.

The Health and Medicine Division conducts innovative research on health and medically related subjects, such as disease prevention and treatment, immune system enhancement, anti-aging medicine, alternative cancer therapies, Traditional Chinese Medicine, and many other alternative and complementary medicine therapies in order to enhance human health, longevity, and well-being worldwide.

These are just a few examples of ISE's innovative research and development activities.

We Do what others only talk and speculate about. We Go where others fear to tread.
